ADEZZ

DESIGN TO GROW

Preface

We are proud to present the new ADEZZ. More focus, fewer brands. We are combining the products of DIPOTT and One To Sit into one, the ADEZZ brand. With a new corporate identity, clearer portfolio and new product names. These changes will help you enrich your customer's outdoor experience with our wide range of products. Together we are aiming for the best results. But not everything changes: our quality and service remain the same!

We have been producing and selling the most beautiful garden products since 2009. Our products enable you to make a difference for your customers. Our company has grown steadily since day one into the reliable partner we are today and will continue to be.

Outdoor time spend has taken off in recent years and is becoming an increasingly important part of our daily activities. With our products you create the atmosphere in which customers can relax and enjoy their garden. As a result, your gardening work will leverage at its best and you invariably put a smile on the customer's face during delivery. We design and produce all our products ourselves. As a result, we can always guarantee the top quality that you have come to expect from us at the best possible prices. Everything is manufactured in Europe with the greatest care, so that we are sure that the products meet our standards. We also keep a large stock, which allows us to deliver quickly.

ADEZZ products enable you to take care of the complete furnishing and decoration of your customers' living or outdoor space. The strength for you as a green professional lies in the endless possibilities you have to combine our products from the different categories for projects at hand. We use the same quality materials, finish and styles so that the products match each other.

Development ADEZZ GROUP

Below we show you the path we have walked with Adezz since its foundation 9 years after the turn of the century.

2009

ADEZZ

Our ADEZZ label includes a wide variety of superior quality garden products. Because we design all the products ourselves, we are able to provide contemporary and timeless products that enhance any garden. For example, we offer planters in several materials; Corten steel, aluminium, Fibreglass, polymer concrete and hardwood.

Origination of Adezz

Mandenmakerstraat, Uden

Production of Fibreglass planters in Reek

Production of wooden planters in Veghel

2014

VERTUSS

Walls and partitions have become an integral part of a garden design, as opposed to the formerly horizontally-oriented garden layout. With VERTUSS, we help to green walls with our vertical garden systems. Vertical greenery not only adds value to the building, but it also improves air quality, oxygen production and climate control in your familiar learning, working or living environment.

With VERTUSS, we focus on systems that promote nature-inclusive construction. A degree of greenery is attainable within any given budget, thanks to our modular systems.

Focus on exploitation and processes

2010

Start of Fibreglass production, Poland

2011

Opening of an extra warehouse Frontstraat, Uden

2012

FORNO

Since 2012, ADEZZ has produced a wide range of fire-oriented products in-house under the FORNO label for the landscaper/ gardener, such as; garden fireplaces, outdoor kitchens and wood storage units. Our expertise lies in making high quality products that provide a warm outdoor ambience. This durable Dutch quality product is sure to add value to your garden design.

Expansion of the steel production on a new location, Poland

2016

FURNS

FURNS was founded because the projects to which ADEZZ delivers continued to grow in size and increasingly these ended up in public spaces. With FURNS, the experiences, qualities and specialist crafts of the past have been merged to focus fully on public spaces. We utilise durable materials that can withstand weather and vandalism. This is essential in outdoor spaces. FURNS has been supplying robust outdoor materials in various climates for many years. Our project managers are happy to proactively jump on board with you and your client to consider the applications of our furniture, to help perfect your project together.

With stunning, timeless designs, all our products can be beautifully combined. As a result, FURNS products can also be of immense added value for larger garden and park projects. For instance, projects in sports, culture and hospitality areas.

2017

Opening a new warehouse and offices on a new location
Liessentstraat, Uden

2019

DIPOTT

Versatile production capabilities gave ADEZZ's designers more scope to design unique products. These premium planters and pots deserve to be showcased, which we have brought about, under the brand name DIPOTT. The high-end designs under this label are sold exclusively via green professionals. Stand out even more with these products, and give each project a distinctive look&feel.

Materials

Within the ADEZZ collection we use a number of Standard materials for the collection.

Corten steel

The Corten steel material has an orange-brown color, which is formed by a natural layer of rust. Another name for Corten steel is weathering steel: weather conditions have a positive influence on this material.

Corten steel is a metal alloy consisting of iron, to which copper, phosphorus, silicon, nickel and chromium have been added. When exposed to the outside air, the material is covered with a protective layer of rust. This natural rust layer forms the protection against further corrosion. As a result, Corten steel products have a long lifespan.

Aluminium

Aluminium is corrosion resistant and can therefore be left outside all year round. The material will not be harmed by the weather. After the aluminium product has been produced, it is powder coated with a strong adhesive primer. It is then finished with a scratch-resistant colour coating.

Coated steel

Once constructed, the coated steel planter is given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This is applied with a strong adhesive primer. Finally, the planter is finished with a hard topcoat of Qualicoat class 2. These layers ensure that the planter is of very high quality and scratch resistant.

Fibreglass

Our Fibreglass products are made of high-quality reinforced Fibreglass. This is a sturdy material. It won't tear because reinforcements are also put in the corners. In addition, our products are coloured through and through, which ensures that they also retain their colour well.

Fibreglass glossy

Our Fibreglass products are made of high-quality reinforced Fibreglass. This is a sturdy material. It won't tear because reinforcements are also put in the corners. In addition, our products are coloured through and through, which ensures that they also retain their colour well. The "glossy" finish provides a very smooth material, which is also easy to clean.

Hardwood

With the use of hardwood we give our products a natural look. All our hardwood has durability class 2 and lasts up to 25 years. The wood doesn't require any treatment due to this high durability class. The wood will wear over time into a natural greying effect. This does not affect the quality.

Bamboo

Bamboo is becoming increasingly popular as an element in gardens and this is reflected in our products. It is an excellent alternative to tropical hardwood. This is because bamboo grows much faster than hardwoods and can therefore be harvested much sooner. Tropical hardwood forests take 60 to 120 years to regenerate after being felled, while bamboo takes only 4 to 6 years. The plant regrows quickly – so quickly, in fact, that it is necessary to cut it back regularly.

New metallic line

ADEZZ has released a new coating to make your garden even more beautiful. The warm metallic colours bring an extra dimension among all the green, but also looks great indoors. Every incidence of light gives a unique reflection.

Metallic powder coating is a type of coating that uses metallic flakes to create a shiny, reflective finish. The metallic flakes are made of metallic flakes such as copper, bronze or gold. The metallic flakes are mixed with the powder coating and then applied to the product. To do this, the surface is heated to melt the powder and create a durable, long-lasting finish. This makes the coating resistant to various weather conditions.

All our standard planters are available in the metallic line, with a start-up charge of 25%.

New vintage metallic line

ADEZZ has released a new coating to make your garden even more beautiful. The vintage metallic colours are inspired by the vintage trend. The coating has a random pattern applied by hand. This gives your garden an exquisite look. Do you want something different? Then this coating is perfect for you!

Metallic powder coating is a type of coating that uses metallic flakes to create a shiny, reflective finish. Our vintage metallic line has a slightly mottled powder coating. The metallic flakes are made of metallic flakes, such as copper, bronze or gold. The flakes are mixed with the powder coating and then applied to the product. To do this, the surface is heated to melt the powder and create a durable, long-lasting finish. This makes the coating resistant to various weather conditions.

All our standard planters are available in the vintage metallic line, with a start-up cost of 25%.

Planters

CARREZ

This planter with square corners looks great in gardens with clean lines. The sleek, double-turned edge gives it a sturdy appearance. The CARREZ is also ideal for use as a divider in hospitality venues.

OPTIONS

WATERPROOF

CUSTOM MADE

Corten steel

The CARREZ corten steel planter will add warmth and boldness to any garden, thanks to the orange-brown patina on the metal. This patina is formed by a natural layer of rust. Another name for corten steel is weathering steel: weather conditions have a positive effect on this planter.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion, extending the planter's life.

Aluminium

The CARREZ aluminium planter gives gardens a timeless look. The planter is corrosion resistant. By default, it is not waterproof. Aluminium is very lightweight. The aluminium planter can be left outside all year round without damage, even in freezing temperatures. That means that this you will enjoy this planter for many years.

Once constructed, the planter is given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This powder coating is available in a variety of colours and is applied with a strong adhesive primer. Finally, the planter is finished with a hard topcoat. This ensures that the CARREZ aluminium planter is scratch resistant.

Hardwood

The CARREZ hardwood planter gives gardens a robust and warm look. This planter is made of tropical hardwood. All our hardwood is classified as durability class 2 and will last up to 25 years. The use of hardwood creates a planter that blends beautifully with the lush greenery of the garden environment.

Due to the high durability class of the wood, this hardwood planter needs no further treatment. The planter will turn grey over time. This colour change does not affect the quality of the planter. The planter is constructed using only high-quality stainless-steel fasteners, and the base is lined with an anti-root membrane.

Fibreglass

The CARREZ Fibreglass planter gives gardens a modern look. The Fibreglass planter is intended for outdoor use. By default, it is not waterproof. The planter is supplied in standard colours. Other colours can be ordered for an additional cost, so there is a CARREZ Fibreglass planter to match every design scheme.

Our Fibreglass planter is made of high-quality reinforced Fibreglass. This makes the planter sturdy. The reinforcement has been extended into the corners, which prevents splitting. The Fibreglass is dyed through, and the planter will retain its colour.

Coated steel

The CARREZ galvanised steel planter gives gardens a timeless look. The planter's finish ensures that it is corrosion resistant and will last for many years outdoors.

Galvanised steel has a protective layer of zinc. Once constructed, the coated steel planter is given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This is

applied with a strong adhesive primer. Finally, the planter is finished with a hard topcoat of Qualicoat class 2. These layers ensure that the planter is of very high quality and scratch resistant.

TRIANGLE

The TRIANGLE, as the name suggests, is a triangular planter that will look good in almost any garden. Its shape makes it perfect for breaking up or filling in a corner.

OPTIONS

WATERPROOF

Corten steel

A new shape: a geometric prism with sleek, angular sides. Our corten steel TRIANGLE has a warm appearance and can be beautifully combined with other corten steel elements in the garden. The TRIANGLE is for those looking for something just a little different!

The planter's warm appearance comes from its distinctive orange-brown patina, which is the result of a natural layer of rust. Another name for corten steel is weathering steel: weather conditions have a positive effect on this planter.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion so you can enjoy the TRIANGLE for many years.

Aluminium

The CONIC aluminium planter gives parks and gardens a graceful and timeless look. The planter is corrosion resistant. By default, it is not waterproof. Aluminium is very lightweight. The aluminium planter can be left outside all year round without damage, even in freezing temperatures. That means that this you will enjoy this planter for many years.

Once constructed, the planter is given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This powder coating is available in a variety of colours and is applied with a strong adhesive primer. Finally, the planter is finished with a hard topcoat. This ensures that the CONIC aluminium planter is scratch resistant.

Fibreglass

The CONIC Fibreglass planter gives parks gardens a modern and graceful look. The Fibreglass planter is intended for outdoor use. By default, it is not waterproof. The planter is supplied in standard colours. Other colours can be ordered for an additional cost, so there is a CONIC Fibreglass planter to match every design scheme.

Our Fibreglass planter is made of high-quality reinforced Fibreglass. This makes the planter sturdy. The reinforcement has been extended into the corners, which prevents splitting. The Fibreglass is dyed through, and the planter will retain its colour.

BANDU

This sustainable planter is characterised by the variety of board widths used in its construction. Thanks to the recessed base, the BANDU appears to float, giving it a graceful appearance.

Bamboo

Bring a sustainable element into your garden with our BANDU: a planter made of bamboo. The natural appearance of bamboo will look beautiful in any garden. To help the bamboo retain its dark brown colour, treat with a protector once a year. If left untreated, the bamboo will develop a natural grey colour, which will also look lovely in your garden. The varibo pattern gives this planter character.

Bamboo is becoming increasingly popular as an element in gardens and this is reflected in our products. It is an excellent alternative to tropical hardwood. This is because bamboo grows much faster than hardwoods and can therefore be harvested much sooner. Tropical hardwood forests take 60 to 120 years to regenerate after being felled, while bamboo takes only 4 to 6 years. The plant regrows quickly – so quickly, in fact, that it is necessary to cut it back regularly.

VALENCIA

The VALENCIA is the chic version of the CARREZ. However, this wooden planter has feet and is a little more robust. It will look very much at home in a Mediterranean garden.

OPTIONS

CUSTOM MADE

Hardwood

The VALENCIA hardwood planter gives gardens a robust and warm look. This planter is made of tropical hardwood. All our hardwood is classified as durability class 2 and will last up to 25 years. The use of hardwood creates a planter that blends beautifully with the lush greenery of the garden environment.

Due to the high durability class of the wood, this hardwood planter needs no further treatment. The planter will turn grey over time. This colour change does not affect the quality of the planter. The planter is constructed using only high-quality stainless-steel fasteners, and the base is lined with an anti-root membrane.

ONYX

The ONYX is a welcome addition to our collection. This planter has a beautifully balanced organic form, giving it an absolutely unique appearance.

Corten steel

The gorgeous curves of the ONYX will add style to your garden. Its rounded shape gives it a soft look. Corten steel adds warmth thanks to the orange-brown patina on the metal. This patina is formed by a natural layer of rust. Another name for corten steel is weathering steel: weather conditions have a positive effect on this planter.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion and makes the product long-lasting.

DOMUS

The DOMUS planter has a distinctive 'floating' rim around the top. This will create a light and dynamic look in gardens and on patios.

Corten steel

The DOMUS corten steel planter will add boldness and warmth to any garden, thanks to the orange-brown patina on the metal. This patina is formed by a natural layer of rust. Another name for corten steel is weathering steel: weather conditions have a positive effect on this planter.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion, extending the planter’s life.

Aluminium

The DOMUS aluminium planter gives gardens a stylish look. The planter is corrosion resistant. By default, it is not waterproof. Aluminium is very lightweight. The aluminium planter can be left outside all year round without damage, even in freezing temperatures. That means that you can enjoy this planter for many years.

Once constructed, the aluminium planter is given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This powder coating is available in a variety of colours and is applied with a strong adhesive primer. Finally, the planter is finished with a hard topcoat. This ensures that the DOMUS aluminium planter is scratch resistant.

BOCCA

This planter is ideal for short and low-growing ornamental grasses. Combine it with seating to create a cosy garden retreat. You can also use the planter as a fire bowl to add even more warmth and cosiness to the garden.

Corten steel

The BOCCA corten steel planter will add boldness and warmth to any garden, thanks to the orange-brown patina on the metal. This patina is formed by a natural layer of rust. Another name for corten steel is weathering steel: weather conditions have a positive effect on this planter.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion, extending the planter’s life.

Coated steel

The BOCCA coated steel planter gives gardens a timeless look. The planter is corrosion resistant. By default, it is not waterproof. The material is also durable and strong. The planter is available in RAL colour 9016 as standard. All other standard RAL colours can be ordered for an additional charge.

Once constructed, the coated steel planter is given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This is applied with a strong adhesive primer. Finally, the planter is finished with a hard topcoat of Qualicoat class 2. These layers ensure that the planter is of very high quality and scratch resistant.

Water elements

POND AND POND WALL

This modern pond is available in square and rectangular versions. The still water in the pond creates a calm atmosphere in the garden.

Bring even more life and movement to your garden by adding a pond wall to your pond. This wall can be installed fixed or freestanding. It is available with either a letterbox waterfall or a three-spout fountain waterfall. Whichever version you choose, this pond wall is a work of art!

OPTIONS

CUSTOM MADE

Corten steel pond wall

Tranquil and evocative, our corten steel pond wall is a wonderful addition to a garden. The pond wall is suitable for freestanding or fixed installation at our pond, making it an even more dynamic garden feature. We have free-standing pond walls with either a letterbox waterfall or a three-spout fountain waterfall. There’s a wall to suit every pond and garden!

Corten steel has an orange-brown colour, the result of a natural rust layer. Another name for corten steel is weathering steel: weather conditions have a positive effect on this material.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion, so the pond walls will last for many years.

Corten steel pond

Tranquil and evocative, our corten steel pond is a wonderful addition to your garden. The pond is suitable for plants and fish, making this water feature a beautifully dynamic garden element. We coat the interior surfaces of our corten steel ponds with polyurea, so the metal will not corrode. Our ponds are equipped with a fixed overflow pipe as standard. They can also be ordered with optional inlet holes drilled on either the short or long side.

Corten steel has an orange-brown colour, the result of a natural rust layer. Another name for corten steel is weathering steel: weather conditions have a positive effect on this material.

WATER TABLE

LED lighting gives this water table show-stopping appeal. Its fountains further enhance the ambience of the garden. The lights and fountains can be controlled separately.

OPTIONS

CUSTOM MADE

Corten steel

Our water tables are distinctive and stylish garden ornaments. This corten steel water table will look lovely among the lush greenery of any garden. All our water tables include a pump and LED-lit fountains as standard. So you can enjoy this water feature at night too!

Corten steel has an orange-brown patina, giving the water table a bold, warm look. The colour is the result of a natural layer of rust. Another name for corten steel is weathering steel: weather conditions have a positive effect on this material.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion, so the water tables will last for many years.

WATER BOWL

The water bowl is a beautiful addition to almost any outdoor space. It will create a pleasant, tranquil environment.

Steel

The steel water bowl is coated with anthracite. With its modern design, it will look splendid in any garden. Adding this water decoration to your garden will make it a place where you can really relax and unwind. Our water bowls are multifunctional. They have a hole that can be sealed with a rubber stopper, allowing them to be used as a planter.

Our anthracite water bowl is corrosion resistant. Coated steel is also durable and strong. Once constructed, the coated steel water bowl is given several finishing treatments. The bowl is galvanised to prevent rust formation, and a strong adhesive primer is applied. Finally, the water bowl is finished with a hard topcoat of Qualicoat Class 2. These layers ensure that the water bowl is of very high quality.

Coated steel

WATER BLOCK

Water flows attractively over all four sides of this distinctive water feature. This means it can be positioned anywhere in the garden. The water streams gently over the edges into the collection tank, creating the effect of a soothing waterfall.

Corten steel

Our corten steel water block is a distinctive and stylish garden ornament. Water bubbles up through the stainless steel nozzle, which is enhanced with LED lights. The water then flows smoothly down the sides of the block into the underground collection tank before being pumped back to the top. The LED lighting provides extra ambience at night.

Corten steel has an orange-brown patina, giving the water block a bold, warm look. The colour is the result of a natural layer of rust. Another name for corten steel is weathering steel: weather conditions have a positive effect on this material.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion, so the water blocks will last for many years

Aluminium

Our aluminium water block is a distinctive and stylish garden ornament. Water bubbles up through the stainless steel nozzle, which is enhanced with LED lights. The water then flows smoothly down the sides of the block into the underground collection tank before being pumped back to the top. The LED lighting provides extra ambience at night.

Aluminium is corrosion resistant: the water block can withstand freezing temperatures and other weather conditions without damage. You will be able to enjoy this product for many years. The aluminium water block is available in several colours.

Once constructed, the aluminium water block is given several finishing treatments. The material is roughened to allow better adhesion of the powder coating. This powder coating is available in a variety of colours and is applied with a strong adhesive primer. Finally, the aluminium is finished with a hard topcoat. This ensures that our water blocks are scratch resistant.

Garden furniture

SOLID TABLE

The table has a solid, closed base that continues seamlessly into the tabletop, giving it a modern, sophisticated appeal. The SOLID has built-in reinforcement, eliminating the need for a central support bar. This table can also be used in indoor spaces, such as libraries and meeting rooms.

SOLID BENCH

The SOLID bench completes our SOLID series. Like the table, the bench has a simple, bold design, with the solid, closed base continuing seamlessly into the seat. Even more comfortable when combined with our cushions!

Aluminium

The SOLID table has a bold, sleek appearance, which is enhanced by the closed sides. The sleek design will complement our other garden furniture, such as the SOLID bench. Our aluminium furniture is light, strong, hard-wearing and corrosion resistant.

Once constructed, the furniture is powder coated with a strong adhesive primer. It is then finished with a scratch-resistant colour coating. This coating is available in several standard RAL colours.

BORRA TABLE

This cubism-inspired table is available with an aluminium tabletop only. The BORRA, in contrast to the SOLID, allows a chair to be placed at the short end. This table will also look attractive in indoor public spaces.

Aluminium with oak legs

In this bold, clean, minimalist design, the tabletop flows smoothly into the legs. These legs are made of hardwood. Our aluminium furniture is light, strong, hard-wearing and corrosion resistant.

Once constructed, the furniture is powder coated with a strong adhesive primer. It is then finished with a scratch-resistant colour coating. This coating is available in several standard RAL colours.

Aluminium

COLLA

The stylish splayed legs of the COLLA table are made of wood for a natural look. This table has a slimmer tabletop when compared to the SOLID and the BORRA, giving it a chic appearance.

Aluminium

When designing the COLLA table, we chose a sophisticated combination of a hardwood frame and a tabletop constructed from thick aluminium. The result is a unique and timeless table. The aluminium table is corrosion resistant.

Once constructed, the furniture is powder coated with a strong adhesive primer. It is then finished with a scratch-resistant colour coating. This coating is available in several standard RAL colours.

ROLLO

This table creates a cosy, intimate atmosphere in any outdoor space. The ROLLO has a solid steel frame and a fibreglass tabletop. The cleverly designed base allows you to place chairs anywhere around the table.

Fibreglass and coated steel

Our collection would not be complete without a round table! With its minimalist lines, the ROLLO table is the perfect fit for any garden. This tabletop is made of high-quality reinforced fibreglass . This reinforcement is extended into the corners of the product, which prevents cracks and tears.

All our fibreglass furniture is made with adjustable feet, so it will always be level and stable, even on uneven ground. The fibreglass is dyed through, and the furniture will retain its colour. The ROLLO table is available in RAL colour 9016 as standard.

O2S

The O2S is one of our original trendsetters. This stylish lounge furniture is made of fibreglass and is available in a variety of colours. It offers the ultimate in comfort and relaxation for a sunny corner or next to the pool.

Fibreglass

The O2S chair stands out with its luxurious, timeless and refined look. Turn a seating area into a tranquil space with this chair. Its design is reflected in the entire O2S range, resulting in a harmonious, coordinated collection. The chair is made of high-quality reinforced fibreglass . This reinforcement is extended into the corners of the product, which prevents cracks and tears from forming. The armrests are made of teak hardwood as standard.

All our fibreglass furniture is made with adjustable feet, so it will always be level and stable, even on uneven ground. The fibreglass is dyed through, and the furniture will retain its colour. The O2S chair is available in RAL colour 9016 as standard.

GARDEN BOX

The garden box is the ideal way to store your cushions safely outside. This stylish cushion box will look great when combined with items in the BORRA or SOLID collections. The box is only available in aluminium. However, it can be supplied in a range of colours.

Aluminium

Our garden box is the perfect, stylish storage box for all garden items. The box is beautifully designed and can be finished in almost any RAL colour, making this garden storage box easy to combine with other garden furniture.

The garden box is made of strong, low-maintenance aluminium. Once constructed, the box is powder coated with a strong adhesive primer. It is then finished with a scratch-resistant colour coating. The box is easy to open and close thanks to the solid lid construction and gas-spring hinges. An integrated lock ensures that cushions and other items can always be stored securely.

SERA

A bold, clean, minimalist design. The simplicity of the SERA chair makes it the perfect complement to all the tables in our collection. This chair will make your garden furniture set complete.

Fibreglass

The SERA chair is made of high-quality fibreglass polypropylene (plastic) and is available in several colours. The SERA chair's simplicity makes it easy to mix and match, and it's also stackable.

Because this chair is made from plastic, it is weatherproof and not affected by moisture. It will not rot or mould when exposed to rain, for example. The material will also not warp in the sun, and since it is UV resistant, it will also not discolour or fade. You will enjoy this product for many years.

Walls

WALLS

This wall's hollow construction allows easy installation of additions like lighting. It comes into its own as a partition, for example, to separate planted and paved areas.

OPTIONS

CUSTOM MADE

Corten steel

With its bold, warm look, the corten steel wall adds a striking structural element to green spaces. The wall can also be used to create a private corner or provide shelter from the wind. The hollow construction makes it easy to install accessories. The wall should always be fixed securely to the ground.

The orange-brown patina on the metal contributes to the bold, warm look of this wall. The colour is the result of a natural layer of rust. Another name for corten steel is weathering steel: weather conditions have a positive effect on this wall.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion and makes the wall long-lasting.

Aluminium

With its timeless look, the aluminium wall adds a striking structural element to green spaces. The wall can also be used to create a private corner or provide shelter from the wind. The hollow construction makes it easy to install accessories. The wall should always be fixed securely to the ground.

Aluminium is resistant to corrosion and is available in several colours. It can be left outside all year round without damage, even in freezing temperatures, so you can enjoy this product for many years.

Once constructed, the aluminium wall is given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This powder coating is available in a variety of colours and is applied with a strong adhesive primer. Finally, the wall is finished with a hard topcoat. This ensures that the wall is scratch resistant.

Fibreglass

With its tranquil look, the fibreglass wall adds a striking structural element to green spaces. The wall can also be used to create a private corner or provide shelter from the wind. The hollow construction makes it easy to install accessories. The wall should always be fixed securely to the ground.

Our fibreglass wall is made of high-quality reinforced fibreglass. This makes the wall sturdy. The fibreglass is dyed through, and the wall will retain its colour.

Panels

PANELS

Our panels can be used as a windbreak or to create a private corner in a garden. These panels are also striking works of art. We have a variety of beautiful designs, such as panels with motifs inspired by nature. They add an interesting extra dimension to a garden when set in lush greenery.

Corten steel

Corten steel panels give gardens a bold, warm look, thanks to the orange-brown patina on the metal. This patina is formed by a natural layer of rust. Another name for corten steel is weathering steel: weather conditions have a positive effect on these corten steel panels.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion so the panels will last for many years.

Aluminium

Aluminium is corrosion resistant: The panels can withstand freezing temperatures and other weather conditions without damage, so you can enjoy this product for many years. The aluminium panel is available in several colours.

Once constructed, the aluminium panel is given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This powder coating is available in a variety of colours and is applied with a strong adhesive primer. Finally, the aluminium is finished with a hard topcoat. This ensures that our panels are scratch resistant.

Socles

SOCLES

This pedestal will add extra flair to any garden. The plinth, which is typically used to display a statue or fire bowl, can also be used outside the garden. For example, it will look attractive in galleries or other public spaces.

OPTIONS

CUSTOM MADE

Corten steel

Create a beautiful garden with the sleek lines of our pedestal. The pedestal is perfect for showcasing artworks, water bowls and fire bowls. The open shape of the u-pedestal also makes it suitable for storing logs. The product is made of corten steel, giving it a bold, warm look that works well with the lush greenery in a garden. A real eye-catcher!

Corten steel has an orange-brown colour, the result of a natural rust layer. Another name for corten steel is weathering steel: weather conditions have a positive effect on this material.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion, so the pedestals will last for many years.

Corten steel with seat

Create a beautiful garden with the sleek design of our pedestal with seat. The pedestal can be used as a seat or as the perfect plinth for displaying a sculpture. This makes it easy to create a cosy corner in the garden. The product is made of corten steel, giving it a bold, warm look that works well with the lush greenery in a garden. A real eye-catcher!

Aluminium

Create a beautiful garden with the sleek lines of this pedestal. The pedestal is perfect for showcasing artworks, water bowls and fire bowls. Made of aluminium, this product has a stylish and timeless look that will work well with the lush greenery in a garden. A real eye-catcher!

Aluminium is corrosion resistant. This makes the pedestal able to withstand freezing temperatures and other weather conditions without damage. You will be able to enjoy this product for many years. The aluminium pedestal is also available in different colours.

Once constructed, the aluminium pedestal is given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This powder coating is available in a variety of colours and is applied with a strong adhesive primer. Finally, the aluminium is finished with a hard topcoat. This ensures that our pedestals are scratch resistant.

Letterboxes

IVAR

The IVAR is undoubtedly the most stylish letterbox in our catalogue. The slot in the corner makes this letterbox unique. When placed in the garden of a modern villa, for example, it will look absolutely stunning!

Corten steel

The IVAR corten steel letterbox has a bold and warm look, thanks to the orange-brown patina on the metal. This patina is formed by a natural layer of rust. Another name for corten steel is weathering steel: weather conditions have a positive effect on this material.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion and makes the letterbox long-lasting.

Aluminium

The IVAR aluminium letterbox has a timeless look. Aluminium is also resistant to corrosion and is available in a variety of colours. The letterbox can be left outside all year round without damage, even in freezing temperatures. That means that you will enjoy this letterbox for many years.

Once constructed, the letterbox is given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This powder coating is available in a variety of colours and is applied with a strong adhesive primer. Finally, the letterbox is finished with a hard topcoat. This ensures that the IVAR letterbox is scratch resistant.

CASE

This modern letterbox has the advantage of being large enough to safely store a parcel. It's truly a letterbox for the future. On top of that, the lid offers good protection from the rain.

Corten steel

The CASE corten steel letterbox ensures that your mail and packages can always be delivered safely, even when you're not at home! Our letterbox is equipped with a roomy parcel box. The delivery agent simply opens the lid of the letterbox and places the package inside. The package automatically drops down when the lid is closed. You can empty the letterbox via a lockable door.

PACA

The PACA is the wide version of the CASE. Unlike our other models, the door of this letterbox is located at the front. The PACA will look right at home in any garden!

Corten steel

You'll always receive your mail and packages safely and securely with the PACA corten steel letterbox, even when you're not at home! Our letterbox has a hatch that's roomy enough for a parcel. When the delivery agent closes the hatch, the parcel drops down into the compartment, which is then automatically sealed shut. You can empty the letterbox via a lockable door.

Stairs

STAIRS

This staircase looks beautiful when combined with other corten steel or aluminium garden elements. A simple and attractive way to bridge different levels within a garden, these steps will add style to any green outdoor space.

OPTIONS

CUSTOM MADE

Corten steel

These sturdy corten steel stairs allow you to effortlessly connect areas of different heights. The natural colour and generous width of the metal give the staircase a luxurious and timeless look. This product looks particularly impressive when combined with other corten steel garden elements! The orange-brown patina on the metal contributes to the timeless and luxurious appeal of this staircase. The colour is the result of a natural rust layer. Another name for corten steel is weathering steel: weather conditions have a positive effect on these stairs.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion and makes the staircase long-lasting.

Aluminium

These sturdy aluminium steps allow you to effortlessly connect areas in a garden that differ in height. The natural colour and generous width of the metal give the staircase a luxurious and timeless look. This product looks particularly impressive when combined with other corten steel garden elements!

Aluminium is resistant to corrosion and is available in several colours. The material can be left outside all year round without damage, even in freezing temperatures, so you can enjoy this product for many years.

Once constructed, the aluminium stairs are given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This powder coating is available in a variety of colours and is applied with a strong adhesive primer. Finally, the staircase is finished with a hard topcoat. This ensures that the stairs are scratch resistant.

Edging

EDGING

Our garden edging makes it easy to create borders, gravel paths and lawn edges in any garden. This versatile product has many uses. Combine it with other elements made from the same material to create a cohesive garden look.

Corten steel

Our edging can be used in many ways, for example, to create neat lawns or gravel paths. We have several edging options: straight, set and folded. 2 and 3 mm straight edging and 3 mm folded edging is flexible and can be curved. For larger projects, this edging can also be custom made.

Corten steel has an orange-brown colour, the result of a natural rust layer. Another name for corten steel is weathering steel: weather conditions have a positive effect on this material.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion, so the edging will last for many years.

Galvanised steel

Our edging can be used in many ways, for example, to create neat lawns or gravel paths. We have several edging options: straight, set and folded. 2 and 3 mm straight edging and 3 mm folded edging is flexible and can be curved. For larger projects, this edging can also be custom made.

The hot-dip galvanised material ensures that the edging is corrosion resistant and will last outdoors for decades. Hot-dip galvanising involves immersing the metal in a bath of molten zinc. This prevents the edging from rusting and creates a protective layer over the metal.

U-PROFILES

Add extra dynamism to the garden with our U-profile overlay edging. Combine these overlay profiles with other corten steel elements to create a beautiful and unified garden design.

OPTIONS

CUSTOM MADE

Corten steel

Our corten steel U-profiles have a thickness of 2 mm and are available in five different widths. The U-profiles can be supplied in two formats: with two equal sides of 50 mm or two unequal sides of 50 mm and 150 mm. U-profiles have a length of 2300 mm and are supplied in packs of ten. The U-profiles cannot be sold individually. However, it is possible to order individual corner pieces.

Corten steel has an orange-brown colour, the result of a natural rust layer. Another name for corten steel is weathering steel: weather conditions have a positive effect on this material.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion, so the profiles will last for many years.

Retaining walls

RETAINING WALLS

Our retaining walls are the perfect solution for separating lawns, borders and paths. They can also be used as planters. Retaining walls create a strong structural impact in gardens and outdoor spaces.

OPTIONS

CUSTOM MADE

TOP EDGE:
Our retaining walls always have a double folded top edge, this prevents the wall of bulging and ensures a tight connection.

- STANDARD TOP EDGES:**
- 50 x 25
 - 70 x 30
 - 90 x 40 mm
 - 120 x 40

BASE PLATE:
As a standard our retaining walls have a wide base plate. This helps the elements to be stable even when not fastened. In addition it ensures that the walls do not have to form a closed system.

HEIGHT:
Corten steel: 200 - 1000 mm
Aluminum: 200 - 1000 mm

GROUND LEVEL:
The base plate should be below ground level, this prevents the retaining wall from moving. If the retaining walls are not placed below ground level, they must be secured to the substrate.

FOUNDATION:
Our retaining walls always need to be supported by a levelled and bearing capable ground. When this is not the case, it will be visible in the connections and the straightness of the lines.

Corten steel

Our retaining walls offer almost limitless possibilities for creating shape and form. We always have a variety of sizes, angles and curves in stock. The prefabricated, modular system makes it easy to invisibly join retaining wall elements together.

The orange-brown patina on the metal contributes to the bold, warm look of this retaining wall. The colour is the result of a natural layer of rust. Another name for corten steel is weathering steel: weather conditions have a positive effect on this retaining wall.

Corten steel is a metal alloy made by adding copper, phosphorus, silicon, nickel and chromium to iron. When exposed to air, the material forms a protective layer of rust. This natural coating prevents further corrosion, extending the life of the retaining wall.

Aluminium

Our retaining walls offer almost limitless possibilities for creating shape and form. We always have a variety of sizes, angles and curves in stock. The prefabricated, modular system makes it easy to invisibly join retaining wall elements together.

Aluminium is corrosion resistant and is available in several colours. It can be left outside all year round without damage, even in freezing temperatures, so you can enjoy this product for many years.

Once constructed, the aluminium retaining wall is given several finishing treatments. The metal is roughened to allow better adhesion of the powder coating. This powder coating is available in a variety of colours and is applied with a strong adhesive primer. Finally, the retaining wall is finished with a hard topcoat. This ensures that the retaining wall is scratch resistant.

RETAINING WALL SEAT

Easily transform your retaining wall into a seating area with our hardwood seat. Our retaining walls are the perfect solution for separating lawns, borders and paths. They can also be used as planters and, of course, as additional seating.

OPTIONS

CUSTOM MADE

Hardwood

We stock two different types of seats. Both types are available in four sizes. The seats are made of durability class two Garapa hardwood. They are pre-mounted on galvanised steel strips, making the seats simple to install on existing retaining walls. The seat can be fixed to our retaining wall with seating edge to create additional seating in gardens and outdoor spaces.
